MultiCon

Controllers, data recorders, HMI

The MultiCon line includes advanced controllers and data recorders with great potential closed in small casings. MultiCon has been specifically designed for advanced applications in industrial automatic control engineering. It does not mean, however, that the device cannot be applied in smaller systems. MultiCon can be equipped with three isolated RS-485 interfaces which make it a perfect solution for distributed systems to work as CPU. Thanks to Ethernet interface the device can be monitored via the Internet. A wide range of input and output modules allows to customize CMC precisely as the customer requires it. Thanks to a colour touchscreen working with the user interface becomes a pleasure, while MultiCon operation playing the role of HMI is intuitive and comfortable. Our devices are LINUX-based products to ensure stable operation.

The biggest advantage of all devices from the MultiCon line is a big number of built-in inputs / outputs accessible in one compact device. The most developed version **CMC-99** has up to 48 measurement or digital inputs and 60 virtual channels whereas **CMC-141** has 50% more inputs / outputs and virtual channels.

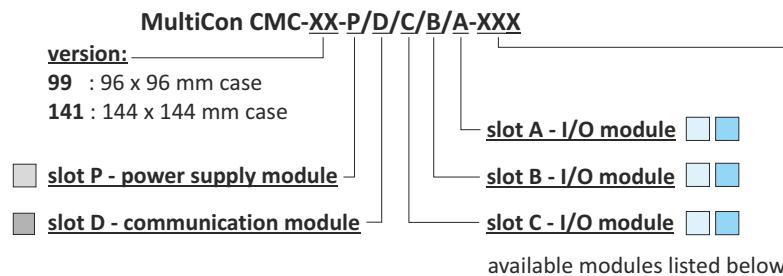

Thanks to a well-thought-out module design you can choose among a wide range of modules and connect them to slots in the way you wish but you do not have to use all slots. You can also decide on your own how to use virtual channels, if they are going to be used for direct measurement readings, mathematical functions, timers, profile creation, set points or virtual objects.

What if one day you want to change your configuration, add new modules or change their slots? That's not a problem! All you have to do is to send your device to an authorized distributor who will perform the changes you require.

MultiCon

Power supply modules

- **PS32:** 19V ÷ 50V DC; 16V ÷ 35V AC
- **PS42:** 85V ÷ 260V DC or AC

PS32 and **PS42** modules are used to supply the MultiCon.

PS32 module can be supplied with:

19V ÷ 50V DC
16V ÷ 35V AC

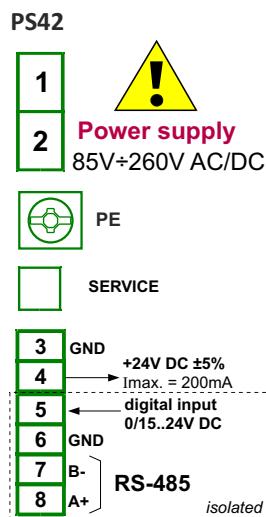

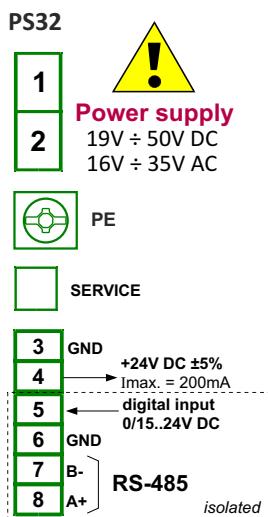

PS42 module can be supplied with:

85V ÷ 260V DC or AC

Additionally modules contain:

- service purpose input (service port),
- 24V DC output, used to supply external sensors,
- digital input, used for digital signal measurement,
- RS-485 port, used for communication with other devices using Modbus protocol.

MODULE PIN ASSIGNMENT

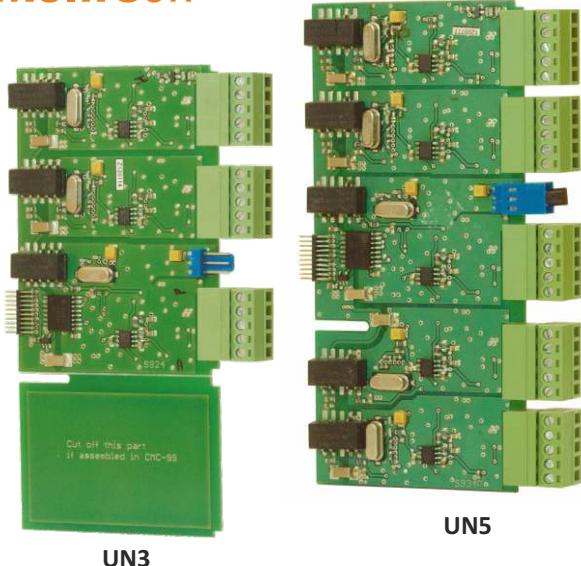

Pin description:

- 1, 2 :** power supply connectors - supply voltage depends on version, but polarization is irrelevant,
- 3 :** ground for voltage output,
- 4 :** +24V DC output, used to power external sensors,
- 5 :** digital input - used to measure digital signals,
- 6 :** ground for connectors 5, 7, 8,
- 7, 8 :** data inputs for RS-485

TECHNICAL DATA

	PS32	PS42
Number of inputs/outputs	5	5
Power supply	19V...24...50V DC; 16V...24...35V AC	85V...230...260 AC/DC; 50-60 Hz

MultiCon

UN modules parameters are:

- **Name** - read-only input name given by the device,
- **Unit** - read-only field („°C”, „mA”, „V”, „Ohm” or „mV”), depending on **Mode** parameter settings,
- **Mode** - allows to set operation mode, eg. select a type of thermocouple or mV measurement range or other,
- **Low limit** - defines measurement level below which in logical channel „Lo” state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi” state will be displayed,
- **Wire compensation** - menu which allows to compensate measurement errors, which can be caused by wrong sensor readings, options: compensation mode (allows to choose parameter which will be used in compensation process), disable (compensation is not active), manual (allows to compensate sensor constant offset),
- **Actual temperature** - parameter in which user enters actual temperature near the sensor, which is measured by more reliable thermometer.

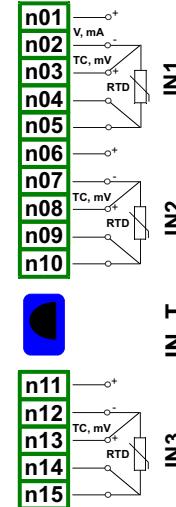

Input modules - universal

- **UN3: 3 isolated universal inputs**
- **UN5: 5 isolated universal inputs**

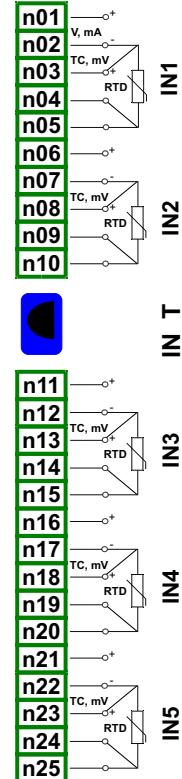

On customer's request, it is possible to install modules equipped with 3 or 5 universal inputs. Each module includes a sensor for cold junction compensation. It is most advanced input module, available for the MultiCon. With its help user can make many different kind of measurements in each channel. This module can measure: voltage, current, resistance, temperature using resistance sensors or thermocouples.

MultiCon

All GND terminals in the **I16** and **I24** modules are common but separated from power supply and other modules.

Current inputs parameters are:

- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit „mA”,
- **Mode** - defines measurement range (0-20 or 4-20),
- **Low limit** - defines measurement low limit, below which the device returns „Lo” value,
- **High limit** - defines measurement high limit, above which the device returns „Hi” value.

Input modules - current

- **I16**: 16 current inputs
- **I24**: 24 current inputs
- **IS6**: 6 isolated current inputs

MultiCon can be equipped with modules having 16 or 24 non isolated or 6 isolated current inputs. To make sensor connection easier, modules **I16** and **I24** have inputs grouped into fours. **IS6** module has all inputs separated one from another and signal polarity on its inputs has no matter.

MultiCon

U16

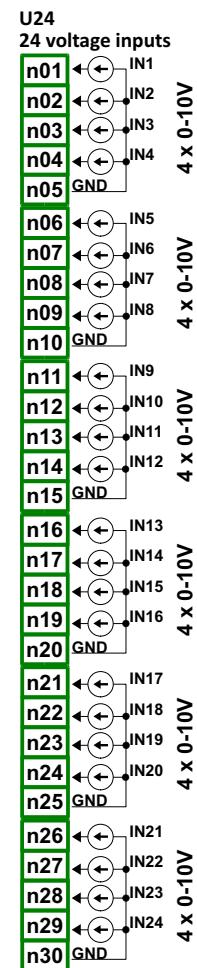

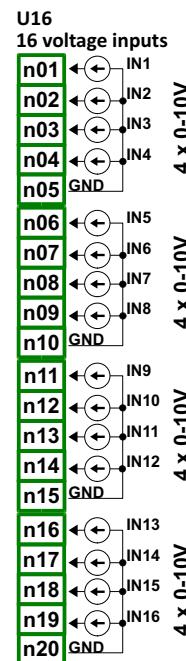

Input modules - voltage

- **U16:** 16 voltage inputs
- **U24:** 24 voltage inputs

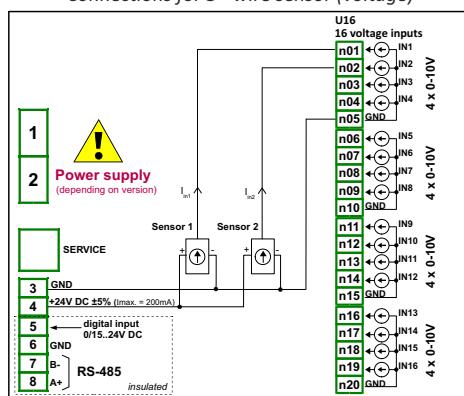

On customer's request, the MultiCon device can be equipped with 16 or 24 voltage input modules.

To make sensor connection easier, inputs are grouped and all ground terminals are common but separated from power supply and other modules.

MODULE PIN ASSIGNMENT

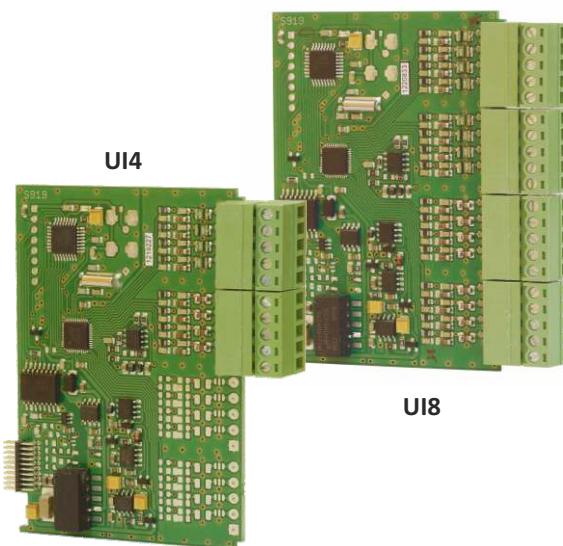

Connections for 3-wire sensor (voltage)

TECHNICAL DATA

MultiCon

Voltage / current inputs parameters are:

- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays unit of measurement,
- **Mode** - defines measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo“ state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi“ state will be displayed.

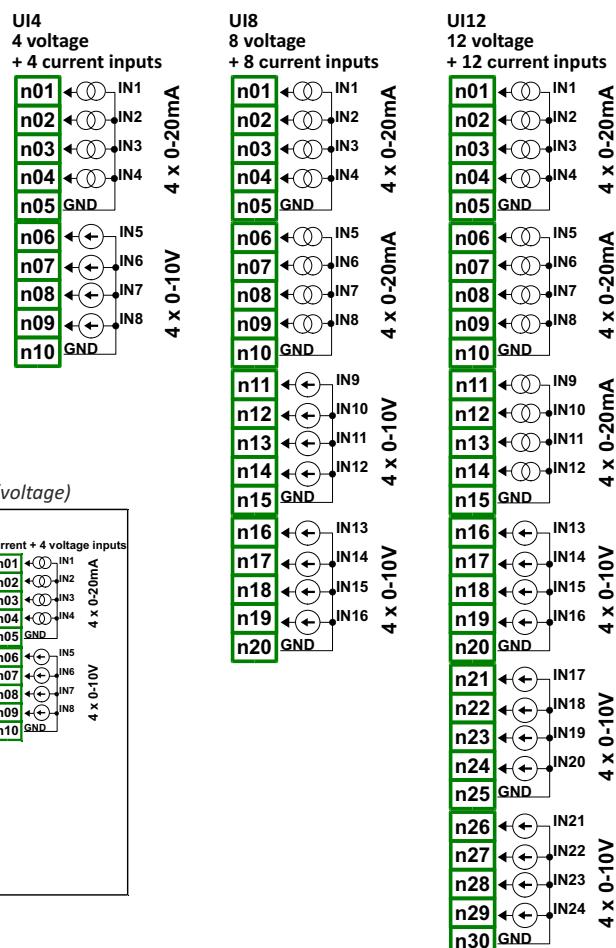

Input modules - voltage/current

- **UI4:** 4 voltage + 4 current inputs
- **UI8:** 8 voltage + 8 current inputs
- **UI12:** 12 voltage + 12 current inputs

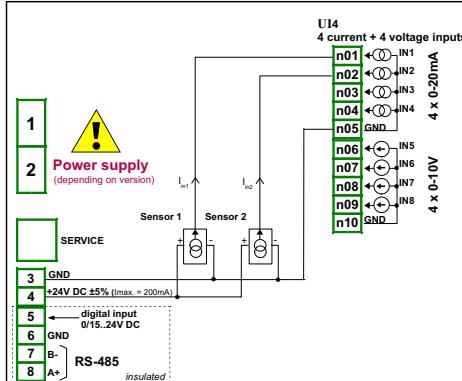

The MultiCon UI modules include 8, 16 or 24 voltage / current inputs, mixed where half of them are voltage and half are current.

To make sensor connection easier, inputs are grouped and all ground terminals are common but separated from power supply and other modules.

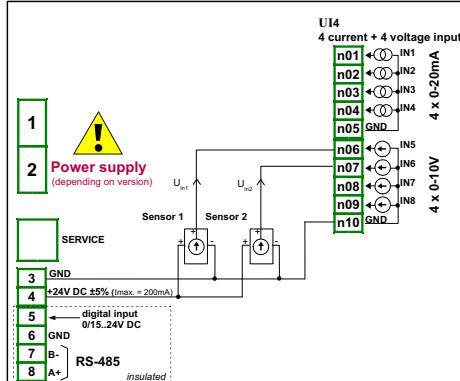

MODULE PIN ASSIGNMENT

Input modules - voltage/current/NTC

■ **UI4N8:** 4 voltage + 4 current + 8 NTC inputs

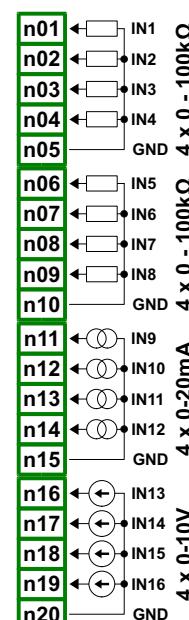

■ **UI8N8:** 8 voltage + 8 current + 8 NTC inputs

The MultiCon **UIN** modules include 16 or 24 voltage / current / NTC inputs, which allows to measure current, voltage, resistance and temperature (using NTC sensors). Inputs are gathered into groups to make connections easier. All ground terminals of a particular module are common, but separated from power supply and other modules. If it is necessary to make measurements with different ground potentials, several UIN modules have to be installed into MultiCon unit.

MODULE PIN ASSIGNMENT

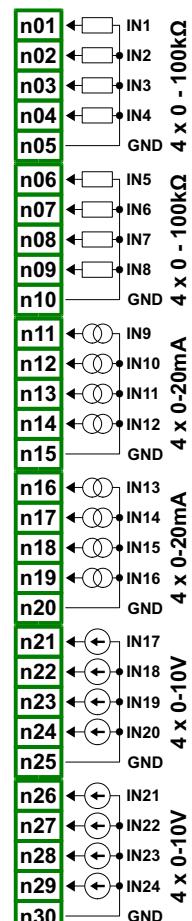

UI4N8

4 voltage + 4 current
+ 8 NTC inputs

UI8N8

8 voltage + 8 current
+ 8 NTC inputs

Voltage / current / NTC (temperature or resistance measurement)
inputs parameters are:

- **Name** - read-only input name given by the device („mA”, „V”, „°C” or „Ω”),
- **Unit** - read-only field which displays unit of measurement,
- **Mode** - defines measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo” state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi” state will be displayed.

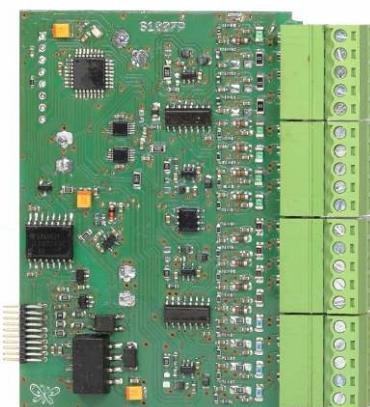

Additionally for temperature mode:

NTC Equation - allows to choose method of entering thermistor characteristic. There are two possibilities: equation with Beta parameter and equation based on Steinhart-Hart coefficients.

When NTC inputs are used, it is recommended to use shielded wires and connect shield to GND connector on the module.

Input modules - thermocouple

- **TC4:** 4 thermocouple inputs
- **TC8:** 8 thermocouple inputs
- **TC12:** 12 thermocouple inputs

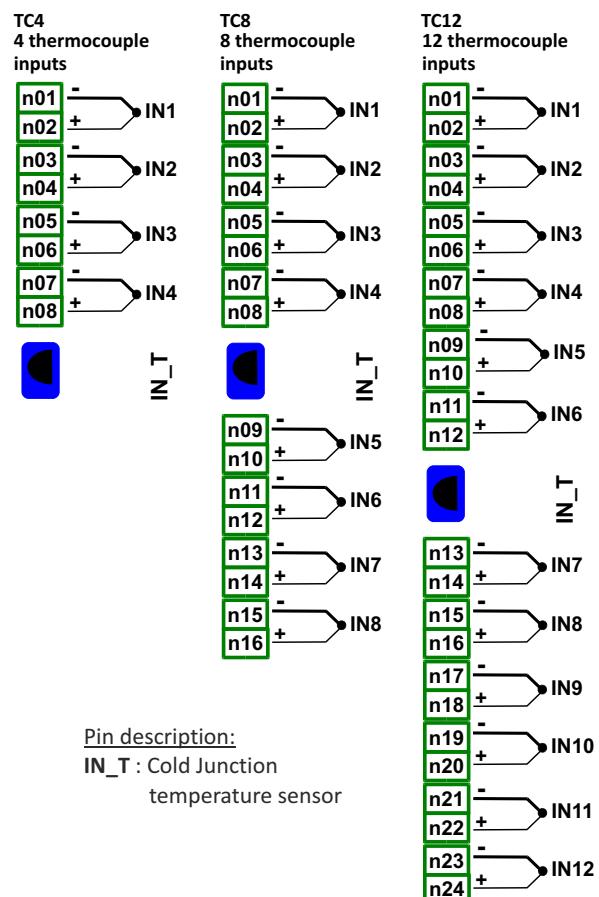

The range of **TC** modules consist of 4, 8 and 12 thermocouple input modules, each equipped with 1 input for connectors temperature measurement. Primary destination of these modules is temperature measurement using thermocouple sensors, but it is also possible to measure voltage with typical thermocouple ranges.

TC modules parameters are:

- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays „°C” or „mV”, depending on **Mode** parameter settings,
- **Mode** - allows to set type of thermocouple or mV measurement range,
- **Low limit** - defines measurement level below which in logical channel „Lo” state will be displayed,
- **High limit** - defines measurement level above which in logical channel „Hi” state will be displayed,
- **Wire compensation** - allows to compensate measurement errors, which can be caused by wrong sensor readings,
- **Compensation** - parameter which allows to manually compensate sensor error, written here value is added or subtracted from measured sensor value,
- **Actual temperature** - parameter in which user enters actual temperature near the sensor, which is measured by a more reliable thermometer,
- **Compensate** - button which activates the compensation,
- **Compensation** - read only parameter; displays voltage value calculated to compensate temperature measurement.

Input modules - RTD

- RT4: 4 RTD inputs
- RT6: 6 RTD inputs

The range of **RTD** modules consist of 4 and 6 RTD input modules. These inputs are used for temperature measurement using RTD type temperature sensors (by 2-, 3- and 4-wire method), or for resistance measurement in the ranges up to 3kΩ. The RT modules cooperate with many kinds of resistance thermometers and thanks to this, there is no need to change the module when another temperature sensor has been used, the user only needs to change the settings in the MultiCon unit.

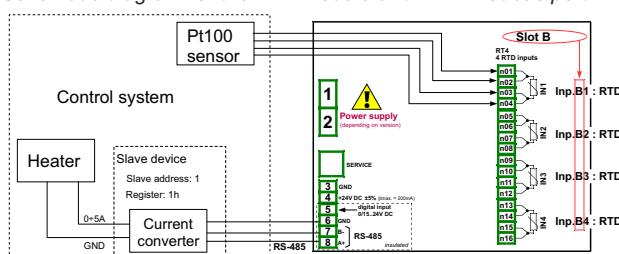

MODULE PIN ASSIGNMENT

Input modules - digital

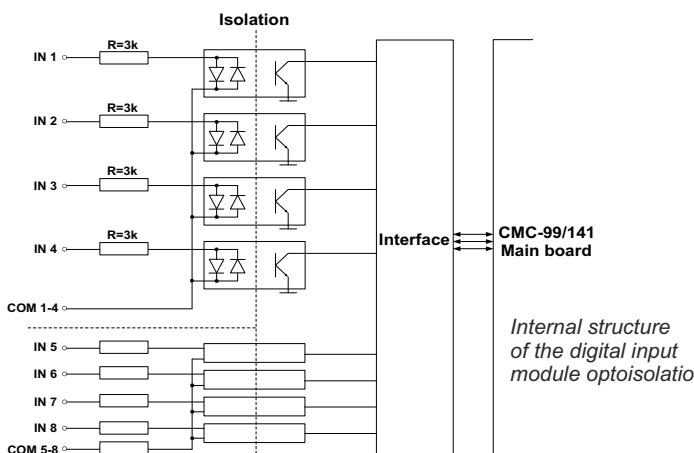

- **D8:** 8 isolated digital inputs
- **D16:** 16 isolated digital inputs
- **D24:** 24 isolated digital inputs

On customer's request, the MultiCon device can be equipped with modules having 8, 16 or 24 digital inputs. These inputs can be used singly, in groups of four or all inputs available in the module. The measurement results are presented in decimal system.

MODULE PIN ASSIGNMENT

D modules parameters are:

- **Name** - read-only input name given by the device,
- **Filter time** - defines minimal time that has to elapse from last input state change, if this change wants to be noticed.

MultiCon

Input modules - hourmeters

- **HM2:** 2 isolated hourmeters
- **HM4:** 4 isolated hourmeters

The **HM2** and **HM4** are the hourmeters modules developed for the MultiCon units. Allow to measure period of time between **START** and **STOP** signals, as well as sum of periods. These modules are ideal solution to control working time of a machinery, duration of phenomena or for maintenance purposes. They have 2 or 4 independent counters. Each counter is equipped with 2 inputs - **START/STOP** and **PRG** (programmable), which can be set as asynchronous **RESET**, **HOLD** or used as independent digital input.

MultiCon

FI2

Input modules - analogue flowmeters

- **FI2:** 2 analogue flowmeters + 2 current inputs
- **FI4:** 4 analogue flowmeters + 4 current inputs

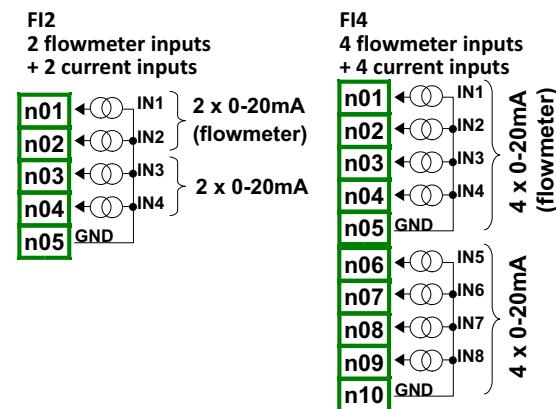

The FI modules have been especially designed for the MultiCon units used in flow measurement applications. They allow user to display and record both actual flow (rate) and total flow (volume).

These modules have extra 2 or 4 analogue inputs for general purpose use. Each flow channel is equipped with **IN[n]** input and common ground **GND**. All inputs are galvanically separated from the device, however have common ground. The user can, thanks to Scaling parameter in Logical channel, interpret measured current by the device at its discretion, which allows to cooperate with any kind of analogue output sensors. The general purpose use current inputs have common ground and they are isolated from the supply voltage and other modules.

Analogue flowmeter parameters are:

- **Name** - read-only input name given by the device,
- **Unit** - read-only field which displays measurement unit,
- **Base unit** - defines unit which is used by the totalizer (for example when flow measurement unit is m³/s, the base unit is „m³”),
- **Mode** - defines current range of selected input (0÷20 mA, 4÷20 mA) and the time base which is used during the measurement,
- **Low limit** - value which determines measured current, below which in logical channel „Lo” state will be displayed,
- **High limit** - value which determines measured current, above which in logical channel „Hi” state will be displayed,
- **Balance** - submenu which contains totalizer settings:
 - **Reset now** - manual reset of the totalizer,
 - **Reset mode** - turns on and off reset from logical channel,
 - **Reset source** - allows to choose a logical channel from the list, which will reset the totalizer, when value in this channel will be greater than 0,
 - **Strobe mode** - turns on and off balance calculating from logical channel,
 - **Strobe source** - allows to choose logical channel from the list, which will hold balance calculating in totalizer,
 - **Counting direction** - turns on and off change of the counting direction,
 - **Direction source** - allows to choose a logical channel from the list, which will change the counting direction.

- **FT4:** 4 isolated pulse flow or ratemeters
+ 4 current inputs

The FT modules have been especially designed for the MultiCon units used in flow or rate measurement applications. They allow user to display and record both actual flow (rate) and total flow (volume). These modules have extra 2 or 4 analogue inputs for general purpose use. Each pulse channel is equipped with counting inputs: **Inp[n]1**, **Inp[n]2** and common ground **COM[n]**. All pulse channels are galvanically separated from the device and from themselves. The general purpose use current inputs have common ground and they are isolated from the supply voltage and other modules.
FT2 and FT4 modules can be used also as high speed **quadrature counters**.

Output modules - current

- **IO2:** 2 current outputs, isolated, passive
- **IO4:** 4 current outputs, isolated, passive
- **IO6:** 6 current outputs, isolated, passive
- **IO8:** 8 current outputs, isolated, passive

Current output modules are used to control other devices based on current in industrial automation applications. These modules are equipped with 2, 4, 6, 8 individually isolated (one from another) passive current outputs.

MODULE PIN ASSIGNMENT

Current outputs parameters are:

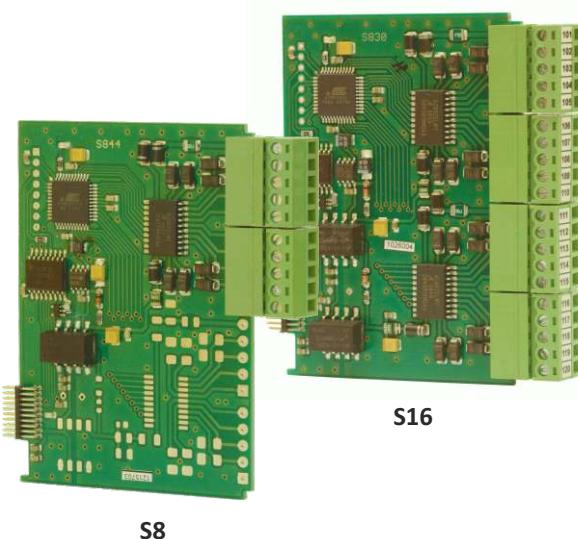

- **Name** - read-only output name given by the device,
- **Unit** - current outputs have constant unit, „mA”,
- **Source** - contains a logical channels list, where selected one will be data source for current output,
- **Lower and Upper level (Input levels parameter block)** - limits input signal range which is downloaded from Source parameter, below this range the input signal will be equal to **Lower level** and above this range the input signal will be equal to **Upper level**,
- **Lower and Upper level (Output levels parameter block)** - defines output signal changes range, below this range the output signal will be equal to **Lower level** and above this range output will be equal to **Upper level**. The relationship between input and output levels is linear and limited by defined range,
- **Alarm level** - defines output value which appears when **Source** parameter returns alarm state, but it can not exceeds the hardware limit. Alarm state is when a logical channel which is data source returns Err, Lo or Hi state.

TECHNICAL DATA
